

Cable ladder 6 m 200 mm

E-no — MP-no 152PZ4R

Industrial ladder with high load-bearing capacity. Suitable for both indoor and outdoor installation. The material is largely recycled, and the steel production is done exclusively with fossil-free energy sources. The advantage of this material is that it self-heals, for example, when cut, and has 60% lower environmental impact than hot-dip galvanizing. The ladder is usable in environmental class max C4. This model has perforated rungs with distance of c-c 250 mm (the second and fourth rungs at each end are closed). The perforated side allows for the installation of branches and angle brackets. The shape of the sides allows cables up to 19 mm in diameter to utilize 98% of the ladder's width.
