

Cable ladder 6 m 600 mm

E-no — MP-no 156Z4

Industrial ladder with thicker sheet metal and higher load-bearing capacity. These are suitable for larger spaces such as industrial and warehouse halls. Made from a zinc-magnesium alloy (25 µm) and suitable for environmental class up to C4. The advantage of this material is its self-healing properties, for instance, when cut, and it has a lower environmental impact compared to traditional hot-dip galvanizing. This model features flat closed-rung steps with a center-to-center distance of 250 mm. The perforated side allows for the installation of branches, angle brackets, etc. Additionally, the profile shape enables cables up to 19 mm in diameter to utilize over 98% of the width of the steps.
