

Wall bracket for wall duct channels

Now all wall duct channels from MP bolagen can be mounted on wall brackets! The new bracket is designed for channels that previously couldn't be mounted with distance from the wall because the slots for wall brackets were missing. The bracket provides a distance of 25 mm from the wall to allow air to pass. The recommended distance between wall brackets is 1 meter to ensure even distribution and stability,

Art.no	Distance	E-no
TBE5	25 mm	11 788 54

TBE5

The bracket is screwed onto the wall and then the channel is placed on the support shelf. With a self-drilling screw the installation becomes both quick and easy.
