

# 3-meter cable ladder with lower weight!

We are now expanding our range of cable ladders with an additional model. Since many electricians suffer from lifting things above shoulder height, we have developed a ladder with thinner material. With 30% less weight and a load capacity that is sufficient for most installations, there are only advantages. The short length also allows for easy transportation, for example, in construction elevators.

The cable ladders can be installed indoors in environmental class C2.

Width	Art.no
200 mm	MP-102 LS
300 mm	MP-103 LS
400 mm	MP-104 LS
500 mm	MP-105 LS
600 mm	MP-106 LS

## LS

Cable ladders with the side profile in this design are called LS, and the perforated side allows for the installation of various accessories.

If using a telecom channel in the cable ladders, it can be secured under the edge of the side profile.

When using cables with a maximum diameter of 20 mm, the entire width of the cable ladder can be utilized, up to 97%.

Deflection in mm according to SS-EN 61537 test type II
